

█ Euler
 █ Verlet
 █ RK4
 █ scalar
 █ optimised

Wall-time speedup
(scalar / optimised — > 1 = optimised wins)

Time-per-step speedup
(scalar / optimised — > 1 = optimised wins)

Throughput speedup
(optimised / scalar — > 1 = optimised wins)

GFLOP/s speedup (estimate)
(optimised / scalar — > 1 = optimised wins)

Hardware Counters — perf stat

IPC (insn / cycle)
(higher is better)

L1 D-cache miss rate (%)
(lower is better)

LLC miss rate (%)
(lower is better)

Branch miss rate (%)
(lower is better)

Frontend stall cycles (%)
(lower is better)

Backend stall cycles (%)
(lower is better)

IPC
(higher = better CPU utilisation)

Stall cycle breakdown
(lower = better)

Cache & Branch Performance — perf stat

L1 D-cache miss rate (%)
(lower is better)

LLC miss rate (%)
(lower is better)

Branch miss rate (%)
(lower is better)
